

Reimagining a *better* Device Care Journey

25/06/2026

Powered by
Pega GenAI ✦ **Blueprint™**

The art of the possible — *Built, not promised!*

A repeatable & scalable approach to self-enabled wider Legacy Transformation goal!

What we'll explore over the next hour — the path from a high-fidelity blueprint to a first view of production

~20%

of your most complex use case — built
in under two days, together.

*The rest within reach in weeks**

01

Speed to business value

Idea to working application in
days

02

De-risked rollout

Prove the build before you
commit

03

Agentic AI efficiency

Automate the manual work, at
scale

04

Lower opex

Reduce enhancement & run-cost
across the board

ALSO ON TODAY'S AGENDA

- **An early quantifiable value view**
Work in progress — sharpening it with you

- **Predictable AI spend**
Pega's market-first guard against AI "bill shock"

- **A first production view**
An indicative go-live estimate, to validate

CEOs bet everything on AI. Now they're rationing it to survive the bill.

Metered AI compounds with every step, call, and re-read — and today's token rates are subsidized.

The only certainty is that they go up.

WHAT METERED AI DOES TO YOUR BUDGET

THE PEGA ANSWER

Pay for the outcome, *not the token.*

One predictable rate for each outcome delivered — AI included.
Agents get smarter and take more steps; your cost doesn't move.

WHAT YOU'RE REALLY BUYING

Everyone else

Per token — climbs with usage, not results

Pega

Per outcome — fixed, tracks results

Big picture, vision to value

Solution vision story arc for INTERNAL Pega and Partner reference

01

Telstra vision Device Care Journey

Telstra **Device Care** Journey

The aim: a frictionless, transparent device-care experience — one intelligent orchestration engine that simplifies returns across every channel.

WHAT WILL MAKE IT POSSIBLE

- **One intelligent orchestration engine** — connect logistics, warehouse and verification through **real-time APIs**, breaking down today's operational silos; while aligning to TRAM.
- **Accelerate business agility** — swap the rigid, heavily-customised ServiceNow monolith for Pega's composable microservices; dismantle technical debt and **lower cost-to-serve**.
- **Elevate operational velocity & CX** — slash warranty-return processing times, turning a high-effort support event into a seamless, loyalty-building, upgrade-ready moment — and freeing up agents' time to upsell/cross-sell other Telstra services.
- **A future-proof foundation** — Pega's low-code reuse and native GenAI let Telstra adapt microservices and cross-sell logic **as fast as the market changes**.

02

Discovery Engagement recap

Your Blueprint delivered

with the Test Drive approach

Rapid discovery

0101011010010011
01100110101001

- Discovery sessions to learn about existing process
- AI-powered process to create draft of Pega GenAI Blueprint

Workshop the future

- In-person workshop in Melbourne 10 and 11th of June
- Creation of high-definition Blueprint and scope of Pilot Build

Hands-on experience

- Hands-on session 25th June
- Pilot application demo and roadmap to MLP1

Planning, timing and resources

Align	Prepare	Workshop Day 1	Workshop Day 1	Build App	Hands-on experience
Week 0 2nd June Review and align on the DCM Test Drive approach Identify a project sponsor, primary contact and SMEs Agree the collaboration approach and roles matrix during the Test Drive Agree timeframes and logistics Identify a specific Test Drive Candidate Confirm scope & expectations	Week 0 3rd and 5th of June Collect documentation: - Process flows and business rules, system docs - Video walkthrough of existing systems/processes - Technical specs and architecture details - Any other assets required for workshops	Week 1: Day 1 11th June 1/2-day workshop with business and IT stakeholders Review 'as-is' insights informing the 'to-be' Review, refine and finalise application Blueprint Create business value assessment Finalize process optimization goals	Week 1: Day 1 11th June 1/2 -day workshop with business and IT stakeholders Day 1 workshop continued Finalise business value Import and show Blueprint Test Drive environment Build local datastores with synthetic data Establish APIs with synthetic data	Week 2 15th – 19th June Import Blueprint Test Drive Accelerator environment Build local datastores with synthetic data Establish APIs with synthetic data Build environment for hands-on experience	Week 3 27th June 2-hour interactive demonstration workshop of the application Gather feedback and identify potential enhancements Outline a plan for production-ready MLP Access to the Test Drive application for continued exploration for an agreed upon duration.

Hi-fidelity Blueprint

THE BRIEF

Five challenges we set ourselves.

The bar we set for the workshop — ambitious on outcomes, disciplined on risk and cost.

01 **Reimagine the hardest use case**

Prove the art of the possible — with real speed to value.

02 **Delight customers and store agents**

A better experience for agents, and a more efficient one.

03 **Minimise change management**

Keep disruption to store teams to an absolute minimum.

04 **De-risk delivery, reduce TCO**

Lower the delivery risk and the total cost of ownership.

05 **Make the value visible**

Surface and quantify the value drivers.

Functional Capability Summary

Omnichannel Experience & User Experience

- Web Portal & Mobile Web
- Native Mobile App
- Conversational Chatbots
- Intelligent Email Bot
- VoiceAI
- DX API (Headless UI)
- Constellation UI
- Salesforce Lightning Connect
- Pega GenAI Knowledge Buddy

Workflow & Case Management

- Case Types & Lifecycles
- Visual Process Flows
- SLA Tracking & Escalate
- Dynamic Work Routing
- Approval Management
- Task Automations
- Pulse Collaboration
- Pega GenAI Blueprint
- Pega GenAI Coach

Intelligent Decisioning and AI

- Declarative Expressions
- Decision Tables & Trees
- When Rules (Conditionals)
- Maps & Scorecards
- Adaptive & Predictive Models
- Strategy Rules (NBA)
- Event Strategy Rules
- Data Flows & Datasets
- Text Analytics & NLP

Data & Integrations

- Connectors & Services
- Data Pages (Live Data)
- Data Transform Mapping
- Batch Processing
- BI/DW Exporters
- Pega GenAI Data Connect

Low-Code and Agile

- Infinity Studio
- App Studio Workspace
- Dev Studio Workspace
- Prediction Studio
- Agile Studio & App Factory
- Pega Layer Cake
- Branching & Merging
- CI/CD Deployment Manager
- Pega GenAI Autopilot

Process & Operational Intelligence

- Interactive Reports
- Real-Time KPIs
- Process Mining
- Task Mining
- GenAI Reporting

ServiceNow Architecture - Configured in Pega

Quicker vision to value

High Fidelity Blueprint

See full Blueprint: <https://www.pega.com/blueprint/BPAU-103008/workflow-details>

See it in Action

Experiential Demonstration

See it in action: <https://testdrive-telstra.pegademo.com/web-shell/>

We didn't just plan it — **we built it.**

01**Reimagine the hardest use case**

Both teams refactored, reimaged and rebuilt the sunny day scenario of “**Warranty Returns**” scenario — a ServiceNow application — in **under two days**. Full use case judged achievable within **a week**. ... *Bonus – We chose the hardest use case!*

02**Delight customers & agents**

Seamless across desktop, web and mobile, with future state options like self-service, complete with **AI agents that speed the process up**.

03**Minimise change management**

Integrated with existing **Salesforce** applications — a minimal learning curve for store agents.

04**De-risk delivery, reduce cost**

A working, **headless application** — clear source code, AI-enabled agents and reusable **API / MCP integration** (more agents to come for test and deploy).
*Lowers OPEX; and most importantly we demonstrated strategic benefits for Telstra - minimising **vendor monolith lock-in** with protection from AI “bill shock.”*

05**Make the value visible**

A high-level, **quantified view of the value drivers** — a value-based path to **decommission ServiceNow**.

04

Value analysis

From a 7-year-old legacy app to an **intuitive accelerator.**

Transforming Device Returns with Pega — an MLP journey for 5 demand types

01

Orchestrate & reuse

One microservices layer across Salesforce, LOMS, RIMS and other systems— reuse to transform the rest, faster.

02

Best-of-breed, TRAM-aligned

Five returns workflows · **700k cases a year.**

03

End-to-end case management

Automation and dedupe lift productivity; a better experience for **7,000+ users & +100k customers each year.**

What DCM wants from **an end-to-end workflow** — for customers and employees.

04

Buy vs build — speed & cost

GenAI where it counts — and **no unpredictable token costs.**

05

Lower IT cost & legacy debt

Costly licences, rigid integrations and slow GTM hold DCM back.

Relative cost per case — Pega case vs. agentic builds

Device Care & Warranty Management (Blueprint BPAU-103008) · headline = all-in token cost per run, incl. TCO

A · Pega case	LOWEST COST	B · Agent — uncached	16.2× PEGA	C · Agent — cached	14.9× PEGA	D · Engineered workflow agent	20.8× PEGA
\$0.50 all-in / run (incl. TCO)		\$8.12 all-in / run (incl. TCO)		\$7.47 all-in / run (incl. TCO)		\$10.39 all-in / run (incl. TCO)	
Token cost / case \$0.02		Token cost / case \$3.26		Token cost / case \$2.62		Token cost / case \$1.03	
Tokens / case 4.2K		Tokens / case 921.6K		Tokens / case 921.6K		Tokens / case 350.9K	
× Pega (all-in) 1×		× Pega (all-in) 16.2×		× Pega (all-in) 14.9×		× Pega (all-in) 20.8×	
LLM runs only on the ~9% of steps that need reasoning; the rest execute as deterministic rules, decisions and integrations at zero token cost. One fixed, all-in case price.		Autonomous agent pays tokens for every step, every turn (~200), plus tool/MCP schemas re-sent each turn over a growing context. No caching — all billed at frontier rate.		Same build, best case: ~50% of the prompt prefix billed at the cheaper cache rate.		Every token-reduction lever applied — plan-then-execute, model routing, compaction, tool scoping. It re-engineers what Pega does natively and therefore the TCO rises.	

Bottom line: Pega keeps LLM use to the steps that need it for a predictable fixed price; the agent scenario (B) pays per token for every step and turn. Even a fully-engineered workflow agent stays ~20.8× Pega all-in

Low risk and cost. **High transformative value.**

▼ Limited investment & risk

- Runs on your **existing Pega cloud contract** — no new platform commitment.
- **3 months** to implement MVP; excludes any security assessment, destination system changes, integration changes and change management.
- **Minimal change management** — embedded in Salesforce, familiar to (store) agents.
- **Agentic AI with guardrails** across process, technology and cost.
- **De-risks ServiceNow decommissioning** — proven approach with a Blueprint prototype and Infosys partnership — for DCM, GetHelp, etc.

▲ Significant value to Telstra

- **Significantly lower TCO** — lower licenses; lower maintenance ≈2 FTEs repurposed (**~\$200–500k AUD**).
- **Pega-as-a-Service** — Substantial savings for Software n-2 currency compliance; while minimising operational tech dependencies on underlying stack
- **50% faster** TAT on 150k annual customer returns — **≈3k mandays saved a year**.
- **Better experience** — fewer errors, agents freed for up-sell, higher customer NPS, ability to set this up at a self-serve kiosk
- **A reusable AI enabled 'innovation engine'** — ideate in a day, build end-to-end in **~2–3 months**. Pega orchestration engine per TRAM principles **for the 4 remaining demand types**.

05

Next steps

Next steps – Pressure-test what we’ve have achieved.

The Test Drive showed what’s possible. Here’s how to verify it on your terms — and the assumptions we’d validate with you before any commitment.

Due diligence

to build our confidence

- **Further estimate review** — re-test the 3 month Blueprint figure against full scope, including exception paths.
- **Architecture & integration deep-dive** — validate Salesforce, LOMS, RIMS and other systems effort, security and data residency.
- **Reference checks & hands-on review** — talk to comparable Pega clients; inspect the source code and prototype yourselves.
- **Further TCO & benefits validation** — to test our figures against Telstra’s own baseline.
- **Initial fixed-scope MVP rollout with exit gates** — clear success criteria agreed before any wider rollout.

Assumptions & dependencies

to validate together

- **Scope** — figures cover an extrapolated sunny-day scenario based estimation.
- **Integration** — assumes timely access to Salesforce, LOMS, RIMS and other system experts.
- **Data, environments & people** — representative data, test environments and Telstra SME / agent time.
- **Platform & commercials** — on Pega Cloud under the existing contract; current licensing assumed to cover it.
- **ServiceNow decommissioning** — depends on parallel-run, migration and dependencies beyond DCM. Further impact analysis of partial/full ServiceNow decommissioning is required

Next Steps

- 1 Due diligence
- 2 Cloud and AI Assessment
- 3 Identify build partner

Infosys AI driven Legacy modernization Approach to Pega

Infosys application modernization platform (IAMP) accelerates the transformation of legacy processes into modern, reimagined workflows, enabling faster and cost-effective IT transition. The platform leverages generative AI to rapidly discover and interpret processes and rules from diverse legacy technologies, enabling their conversion and redesign for modernized process automation platform such as **Pega Infinity**.

Infosys Launches AI-Driven Modernization Solution with Pega Blueprint™ and Amazon Bedrock

Infosys has launched the Infosys Modernization Solution, a new AI-driven services framework that brings together Infosys ILEAD, Pega Blueprint™ from Pega, the Enterprise Transformation Company™, and Amazon Bedrock, to enable seamless modernization and business process re-imagination at scale. Part of Infosys Cobalt, the solution provides a structured path from legacy systems to agile, cloud-native platforms on the AWS Cloud.

Using Infosys Live Enterprise Application Development (ILEAD) – a platform that simplifies and accelerates the application modernization and development journey, along with AWS Transform and Pega Blueprint, enterprises can reverse-engineer legacy environments into a modernized, reimagined application while preserving critical business logic.

As part of this modernization journey, the solution aims to enable enterprises to rationalize applications and infrastructure by identifying and retiring redundant or low value systems. This aims to help organizations reduce maintenance costs, optimize IT spend, and simplify their technology landscape as they transition to modern, cloud native platforms.

Pega Blueprint enables blueprint-driven design of future-state applications, supported by pre-built components like Blueprint Estimator, and the Pega Infinity™ PaaS platform. Amazon Bedrock powers generative and agentic AI capabilities, enabling intelligent workflow orchestration, autonomous decision-making, and AI-led process transformation.

The solution aims to deliver tangible business outcomes, including lower total cost of ownership, accelerated migration to AWS, modernization at scale, and business value realization through KPI-driven outcomes. The solution also aims to modernize customer engagement, field operations, core banking, and ERP systems using AWS-native services. It also aims to deliver end to end workflow modernization through automated KYC/onboarding, AI routed dispute management, and smart claims processing built on a unified, cloud first, AI enabled platform.

Backed by deep domain expertise, the Infosys Modernization Solution also aims to empowers enterprises to adopt AI responsibly and evolve toward an autonomous, future-ready enterprise.

Thank you

Building on Pega 'as-a-Service' – focus on actually building your application with AI, rather than maintaining tech stacks

as-a-Service

- Single fee
- Single point of contact
- 24x7x365 service
- Support, patches, and updates
- Highly performant, resilient architecture
- Unlock the full power of Pega products and capabilities
- *No unpredictable token costs*
- *Focus IT resources on building solutions rather than maintaining them*

Appendix 1: Value drivers of transforming with Pega

Nr	Value driver	Justification	Value
1	Increase NPS & customer sat	Instead of 20 min device return, this can now be done in a few minutes	NA
2	Reduce time needed to create a case	- More intuitive and guided way to create cases (from 20 min to less than 10) - Set up the roadmap to in the future perform self-service at kiosk, further increasing NPS and freeing up your staff to do high value added work	Currently it takes 20 min to create the case -50%
3	Reduce error rates	- More data field validation and control steps before moving to the next stage. These are all configurable and can be updated without IT support - Reduced time spent on duplicate checks – consistent approach to managing returns	-50%- 95%
4	Smoother integration into IT architecture (TRAM)	- With Pega, your architecture is in alignment with workflow automation entity layer of TRAM No need to copy over master data – life data functionality and DX API make sure data is always there when needed - Native integrations with Salesforce lightning	Strategic value
5	Simplify user access management	User management is much easier to handle when on Pega 7,000 users who sporadically might need different access rights can be performed with minimal intervention	Reduced manual work
6	Reduce training costs	7,000 users and average 20% churn (<i>Pega assumption</i>) means that 1,400 new users need to be trained each year on the system. With guided case management, the needed training time can be reduced significantly	50% or more ~200-400k AUD annually
7	Improve technology GTM time	- Pega is a comprehensive solution including case management, business rules, AI, and easy integration capabilities and can replace many systems - Build the remaining 4 workflows are a fraction of the cost of the first one thanks to Pega's reuse and Pega GenAI Blueprint for design 0.5 days needed to ideate a generate the first workflow using AI – even less for the remaining 4 Business end users can manage their own reports with drag and drop functionality, further reducing developer time on low value added work	This probably is the biggest value driver in this transformation.
8	Low change management costs	- Seamless integration with salesforce, MCP and embedded directly into salesforce - For store FTEs very limited change management is needed	Risk reduction
9	Freeing up FTEs to do high value added work	Developers are freed up to do high value added work away from ~2-3 FTEs currently who maintain this system (Pega assumption) Store FTEs can use intuitive workflows and can focus more in selling solutions	~200-500k AUD in freed up developer FTEs
